

Goal-Discipline Matching

Oct 9, 2026 · @Archana

Purpose

Each member goal maps to the disciplines that support it, and the weekly goal setter uses this map to decide which session types to increase. The mapping and slot limits below are taken from the planner code (`weekly_session_planner_v2.py`). They have not yet been confirmed by trainers or operations.

Goal to discipline matching

Each of the 10 questionnaire goals maps to one to three disciplines. Those are the ones that can grow in the coming week.

Member goal	Disciplines that grow
Weight loss	Cardio, Shape
Lose fat (inches)	Cardio, Shape
Muscle tone	Shape, Strength
Build strength	Strength, Strength & Conditioning
Improve flexibility	Wellness
Improve cardio performance	Cardio
Improve stamina	Cardio, Strength & Conditioning
Gain weight/muscle	Strength, Strength & Conditioning
Improve overall health	Cardio, Strength, Wellness
Boost energy	Cardio, Wellness
Any other or unrecognised goal	Cardio, Strength (default)

Weekly slot caps and rules

A member can book at most the number of slots below per discipline each week, and the plan never goes above them.

Discipline	Max slots per week	Role
Cardio	1	Goal-driven
Strength	2	Goal-driven
Shape	2	Goal-driven
Strength & Conditioning	2	Goal-driven
Wellness	2	Goal-driven
Red Light Therapy	5	Recovery support, never grown for a goal

Rules, applied in this order:

1. A discipline that matches the member's goal grows by at most 1 session over last week, up to its cap.
2. A discipline that does not match the goal stays at last week's count. It is not grown and not cut.
3. Red Light Therapy stays at last week's count, or starts at 2 if the member has never booked it.
4. A last-week count above a cap is treated as the cap.

Example

A member with the goal Weight loss gets Cardio and Shape increased by one session each, and everything else stays the same. The attendance numbers here are made up for illustration and are not a real member.

Discipline	Last week	This week	Why
Cardio	0	1	Goal match, +1, cap is 1
Shape	1	2	Goal match, +1, cap is 2
Strength	1	1	Not a goal match, stays

Discipline	Last week	This week	Why
Strength & Conditioning	1	1	Not a goal match, stays
Wellness	1	1	Not a goal match, stays
Red Light Therapy	2	2	Recovery, stays
Total	6	8	

To confirm with the team

- ☐ Do trainers and operations agree with each goal-to-discipline match above?
- ☐ Members can pick several goals (the sample member had three), but the planner takes one. Which one counts, or should all matching disciplines grow?
- ☐ Are the slot caps (1, 2, 2, 2, 2, 5) still current in the booking system? They come from the class catalog shared earlier.
- ☐ The wider class catalog has other categories (for example Mind & Body and Bounce) that this table does not cover. Should they be added?
- ☐ Should health history, such as joint or muscle injuries, limit which disciplines can grow?
